

Lee Ming Xiang ✉ mingxiang1006@gmail.com

☎ (+60)12-9791319

I am a domain data scientist with a petroleum geoscience background. I have six years of comprehensive experience in developing and deploying AI solutions to address challenges within the oil and gas industry.

Proficient in natural language processing (NLP), GenAI LLM, and subsurface-relevant AI solutions. I have successfully implemented AI-driven strategies to enhance operational efficiency and decision-making. [LinkedIn profile](#)

Core Skills

Machine Learning,
Deep Learning, Computer
Vision, Natural Language
Processing, GenAI LLM,
Petroleum Geoscience

Data Science Skills

Python, Pytorch, Pytorch
Lighting, TensorFlow, Scikit-
Learn, MLflow,
Spotfire, Power BI, Dash,
Azure, Structure Query
Language (SQL),
Oracle Database,
Docker, Dataiku

Geoscience Skills

Petrel, Omega, Vista, Techlog,
Rock Physics, Seismic
Processing, Seismic
Interpretation, Static
Modelling, Exploration &
Production Cycle

Research Skills

Problem Solving,
Critical Thinking, Innovative,
Collaborative, Rapid
Assimilation

Working Experience

Senior Domain Data Scientist

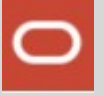

KL Innovation Factory, SLB

Jun 2021 – Present

Kuala Lumpur, Malaysia

- Handwritten & Multilingual RAG for Document Intelligence**
 - Implemented a pipeline for **both handwritten and multilingual RAG** for translation between Latin, Cyrillic, and English languages to retrieve information from documents. Developed and deployed a **multilingual chatbot** for document intelligence.
- ResNet Driven On-Prem OCR for Handwritten Document Analysis**
 - Engineered **Optical Character Recognition (OCR) segmentation** techniques, including line level and word level segmentation, to enhance text detection accuracy and efficiency.
 - Finetuning ResNet-72 architecture**, combining **Long Short-Term Memory (LSTM)** layers in the network, and **achieved a Character Error Rate (CER) of ~17%**.
- High-Fidelity Pre-stack Seismic Signal Enhancement with Self-Innovate Network Architecture**
 - Low-Frequency Self-Supervised Sequential Inference Model (LoF-SSIM)**: developed innovative self-supervised learning model, with sequential inferencing technique for swell noise attenuation.
 - Low-Frequency Hybrid Resnet-ECA Network**: designed and implemented a hybrid network combining ResNet with Efficient Channel Attention (ECA) for effective linear noise removal.
- Cross-Domain Operational Intelligence Retrieval with Advanced LLM Framework [\[Published soon\]](#)**
 - Developed **comprehensive LLM framework** integrating domain prompt engineering, Retrieval Augmented Generation (RAG), and fine-tuning of large language models (LLMs).
 - Enhanced model performance** by fine-tuning an open-source LLM, achieving a 94% accuracy rate—**surpassing finetuned GPT-3.5 Turbo by 3%, pretrained One-Shot GPT4 by 13%**—through strategic hyperparameter tuning and rigorous post-processing safeguards.
 - Versatile LLM framework for multi-domain application**, including drilling engineer for offset well analysis, geomechanics engineer for post-drill model assessment, and reservoir engineer for strategic well placement planning, **demonstrating impact in diverse operational contexts**.
- Real-Time Distributed for Fiber Optic Sensing with Edge-Enabled Streaming Analysis**
 - Revolutionized Distributed Acoustic Sensing (DAS) data processing by **developing a novel signal-to-image conversion algorithm**. Transforming >600,000 data points of high-frequency DAS signals into compact image representations, **achieving a 71% reduction (14MB to 4MB)** in data size while preserving critical signal characteristics. Estimated **bandwidth cost saving ~10,000 USD per month**.
 - Engineered cutting-edge anomaly detection system using **Self-supervised Transformer with Energy-based Graph Optimization (STEGO)**. Adapted the STEGO architecture for time-series data, incorporating attention mechanisms and self-supervised pretraining on domain-specific unlabelled data, delivering a robust solution of **unsupervised semantic segmentation in anomaly detection**.
- Probabilistic Rock Physics Modelling via ML Optimization [\[Published soon\]](#)**
 - Integrated **global sensitivity analysis, derivative free local optimization, and ML clustering**, with theoretical rock physics bounds constraint, to generate stochastic and actionable models
 - Deployed human centric AI SaaS application** integrating Azure function (FaaS) to retrieve data from Postgres SQL (self-designed and deployed), SendGrid API for email services to engineer.
- Transfer-Learned Language Model for Upstream Petroleum Application [\[Link\]](#) [\[Link\]](#) [\[Link\]](#)**
 - Developed and **fine-tuned pre-trained language model tailored for upstream petroleum applications**, to generate an **unsupervised multitask learning model** for downstream NLP tasks.
 - Demonstrate the value fine tuning domain specific language model **surpassing pretrained GPT-2 small and medium model by 10% of accuracy**.

Certifications

	Generative AI with Large Language Models
	Build Basic GANs
	Improving Deep Neural Networks: Hyperparameter Tuning
	Neural Networks and Deep Learning
	Dataiku Core Designer
	Dataiku ML Practitioner
	Dataiku Advanced Designer
	Tibco Certified Associate Spotfire
	Industrial Data Fundamentals
	Data Fusion Fundamentals
	OSDU Developer Training
	Oracle Database Design & Programming with SQL
	Azure AI & Data Fundamentals
	Geosolutions Horizon Fixed Step Training Phase 1 ,2,3

8. *Cross Domain Behind Casing Opportunities (BCO) – Petrophysics & Production*
 - Engineered a **robust analytical framework for cross-domain pattern recognition** using **Explainable AI techniques and ensemble LightGBM** models. Utilized SHAP and LIME for model interpretability, and Shapash, Explainer, and Dalex Arena Dashboard for comprehensive domain analysis.
 - Integrated multi-modal petrophysical data (e.g., resistivity, porosity, permeability) with time-series production rates for a field with 90 wells and 239 well zones, **achieve F1 score of 74% for perforation flag, 95% for BCO flag, 74% for permeability prediction, and 80% of Net Pay Permeability**.
9. *Adaptive Prescriptive Well Performance Intelligence Application* [[Publication Section Item 4](#)]
 - Developed a prescriptive analytics dashboard for well performance, **integrating multi-sources data** (well status, monthly fluid rate, hourly operation data, well test data, monthly fluid target, and well metadata) **with ~ 3 million data points**, for a comprehensive field and well level analysis.
 - Optimized performance in big data analytics, using batch splitting, asynchronous I/O **achieving 87% faster data retrieval**, and multiprocessing approach for **63% faster processing**.
10. *Predictive ML for Real-Time CO2 Emission Forecasting* [[Link](#)]
 - Developed and deployed a **predictive machine learning system** for CO2 emission forecasting based on gas fuel rate predictions. Implemented **autonomous model selection** to choose the optimal model from a series of tree-based and transformer models for each field.
 - Developed a custom data pipeline that **integrated the ML system with Power BI using RESTful API**, enabling near real-time CO2 footprint monitoring across the basin.

Geophysicist

Geosolutions, SLB
Mar 2018 – May 2021

Kuala Lumpur, Malaysia

Seismic processing geophysicist, with experience in narrow and wide azimuth surveys at ultra-shallow, shallow, and deep water in different offshore basins. Experience in seismic processing, mainly on seismic deblending, seismic denoise, demultiple, migration, and velocity picking.

1. Conventional P190 information extraction & SEG-D file list generation were done sequence by sequence has consumed significant production time. Developed an automated bash Linux script for automatic data extraction, **saving production from 2 weeks to 20 minutes**.
2. Automated Parameter Analysis and Recommendation for Adaptive Deghosting, **saving testing time about 70%**.

Achievements

- **Malaysia Patent (MY PI2024001424)- Issued Jun3, 2024**
Data-Driven Optimization for Rock Physics Modelling Assisted by Machine Learning
- **USA Provisional Patent**
AI Approach for Drilling Operation Insights using GenAI LLM – Aug 28, 2024
Generative Artificial Intelligence-based Geomechanical Risk Extraction – Sept 13, 2024
- **2nd runner-up of EAGE Field Challenge 2017**
Represented Malaysia participating in the EAGE Field Challenge 2017 organized by Total company in Paris, France with fully Integrated evaluation and field development project.
- **AAPG L. Austin Weeks Recipient 2017**
Scholarship recipient for the 2017 American Association of Petroleum Geologists Foundation L. Austin Weeks Scholarship program
- **Silver Award in Integrated Exploration and Production Opportunity Evaluation Project 2016**
New prospect finding for Bundi field integrating G&G knowledge. Performed reservoir probability and risk evaluation, and petroleum economic analysis.

Mentoring and Leadership

Technical Mentor for SLB Asia Innovation Program

July 2024 – Sep 2024

Mentoring intern from India on Agentic Multimodality RAG for Operation Intelligence

International Petroleum Technology Conference 2025 Committee

Jun 2023 – Feb 2025

Participate in organizing the Digital, Data Analytics, and Automation program, review submitted abstracts for technical session.

Technical Committee for SLB Machine Learning Innovative Competition

Jan 2023 - Jun 2023

Review the data science challenges and DELFI technology stack used for the competition.

Technical Committee & Mentor for APGCE GeoHackathon

July 2022 - Nov 2022

Worked with Petronas management, geoscientists, and data scientists in developing oil and gas upstream data science challenges. Mentoring participants in applying data science to domain challenges.

Technical Committee for SLB Beijing Geoscience Centre

Dec 2021 - Jan 2022

Designed the hackathon challenge in forecasting the production decline curve using production and formation data.

Volunteer Speaker for Women Who Code Power BI Workshop

Jun 2019

Personal Projects

- Unsupervised Segmentation using Computer Vision
https://github.com/mingxiang1006/Unsupervised_Seg
- Automatic Detection of Solar Roof Top using Computer Vision
https://github.com/mingxiang1006/solar_ai
- Groove Defect Segmentation using Computer Vision

Education

Master of Data Science

Oct 2020 – Jun 2022

University Malaya (UM), Kuala Lumpur

Master Thesis: Generation of Carbon Dioxide Emission based on Prediction of Gas Fuel Rate using Machine Learning (Time Series Prediction)

Bachelor of Technology (Hons) in Petroleum Geoscience

May 2012 – May 2017

University Technology PETRONAS (UTP), Perak

Majoring in Exploration Geophysics, Fundamental in Geology, Petrophysics, and GIS

Final Year Project: Application of Simultaneous Inversion in Sarawak Basin, Malaysia

Student Exchange Program

Aug 2015 – Dec 2015

Missouri University Science & Technology, United States

Studied Petroleum Economics, Reservoir Characterization, General Psychology and Technical Communication
